練 D. $P = 100 - q$, $TC = 70q$, 兩段式定價, 使用費, 固定費, 利潤?

$$P = MC = 100 - q = 70 \Rightarrow q^* = 70$$

$$P^* = 70 \text{ (使用費)}$$

$$\pi^* = \frac{70 \times 70}{2} = 2450$$

$$F = \Delta ABP^* = \frac{70 \times 70}{2} = 2450 \text{ (固定費)}$$
